# Dissemination plan

---

## SHARE 2023-2027

### Background

SHARE- Centre for Resilience in Healthcare aims to become an internationally recognized research centre by reforming the quality and safety of current healthcare systems. An important part of becoming an internationally recognized research centre is to disseminate scientific knowledge and results using a broad spectrum of appropriate arenas. The SHARE dissemination plan 2023-2027 therefore provides both members and collaboration partners with a strategy for how and where scientific knowledge will be distributed.

### Partners

SHARE currently engages more than 70 researchers across the partners and there are around 25-30 PhD students affiliated with the Centre.

### Overall aim 2023-2027

The aim of SHARE's five-year dissemination plan is to make research results related to quality and safety in healthcare available both nationally and internationally. It is equally important to disseminate research results to patients, stakeholders, research communities and across the society as a whole. SHARE researchers should as such recognize the importance of becoming active contributors to the public debate in popular scientific channels and in peer review journals.

To reach the overall aim, the dissemination plan is divided in two main areas:

- Academic contributions
- Popular science contributions

Although a variety of stakeholders can be reached through both these arenas, academic contributions are designed to reach fellow researchers and research communities, while popular science activities are designed to reach patients, stakeholders and the society as a whole and as such, has a slightly different design and layout.

### Large research projects

SHARE has several larger research projects, funded by the Research council of Norway or EU, which all has their own dissemination plans, as well as a number of smaller research projects without dissemination plans. The overall aim for SHARE therefore builds on the total number of dissemination activities for the larger research projects combined with the efforts from all the remaining researchers which all contributes to different smaller research projects.

### Academic contributions

#### Papers and books

For the five-year period SHARE researchers will contribute to the writing and publication of approximately 2-4 textbooks and 200 peer-reviewed articles in international and national journals, distributed as follows:

## Peer-reviewed journals

Scientific results will be published in international peer-reviewed journals including but not limited to the following journals: BMJ Quality & Safety

- BMC Health Services Research
- Journal of Advanced Nursing
- Journal of Patient Safety
- Safety Science
- BMJ Open Quality
- Journal of Clinical Nursing
- Advances in Simulation
- Simulation in healthcare
- International Journal for Quality in Health Care
- Reliability Engineering and System Safety
- Scandinavian Journal of Public Health
- BMJ Open
- Nursing Open
- British Journal of Surgery
- Higher Education
- Education and Training
- European Journal of Integrative Medicine
- Research Involvement and Engagement
- Resilience - International Policies, Practices and Discourses
- Tidsskriftet Sykepleien
- Sykepleien Forskning

## International co-publishing

SHARE researchers have an extensive network of international collaboration partners through the various research projects. Co-publishing across international borders is encouraged.

## Seminars

SHARE research centre will organize annual research seminars for academic partners, empirical partners, and stakeholders, where consortium members, Scientific Advisory Board members, and leading international researchers will be invited to present state-of-the-art research on different topics.

The aim of all seminars should be to exchange knowledge between different stakeholders, and across macro, meso, and micro levels. SHARE research centre will strive to facilitate cross-national attendance on all seminars.

## International conferences

International conferences are highly prioritized within SHARE research centre and viewed as one of the most important strategies to become an internationally recognized research centre. SHARE researchers will therefore aim to attend a large number of conferences. At national and international leading conferences such as Nordic Conference on Research in Quality and Safety in Health Care (NSQH) and The Resilient Health Care Society Meeting (RHCS). SHARE researchers will attend in high numbers to make a large scientific impact. All conference attendance should be associated with oral or poster presentation, and clearly show with the use of SHARE'S own logo that the research is affiliated with the Centre.

Throughout the period, SHARE researchers will strive to be present or contribute with poster or oral presentations at the following conferences:

- The Resilient Health Care Society Meeting (RHCS)
- The Resilience Engineering Association Symposium
- International Forum on Quality and Safety in Healthcare
- The Nordic Conference on Research in Quality and Safety in Health Care (NSQH).
- Nordic Edge Expo
- International Society for Quality in Health Care (ISQUA)
- European Safety and Reliability Conference (ESREL)
- International Ergonomics Association (IEA)
- International Conference on Youth Mental Health (IAYMH)

## Conference host

SHARE will seek to host the international scientific meeting for the Resilience in Health Care Society (2024). In conjunction with the RHCS meeting in 2024, the SHARE research centre will host a RiH Conference where final project outcomes and suggestions for a sustainability platform for continued activity will be presented.

## National conferences

Throughout the period, SHARE researchers will strive to be present at the following national conferences

- Pasientsikkerhetskonferansen
- Helsetjenesteforskningkonferansen
- Nettverk for pårørendeforskning

- Nettverk for forskning og innovasjon i helsetjenesten i Rogaland
- KS konferanse
- Regionalt nettverk for pasientsikkerhetsforskning i Helse Vest.

### **Social media**

SHARE research centre will continuously post news and research results on different social media platforms to reach a broad audience. The following social media platforms are dedicated and designed to reach fellow researchers and research communities:

- SHARE website, English version
- Twitter
- Facebook
- Research gate

### **Digital communication**

SHARE will use Teams® to enable secure sharing of documents within the different research projects as well as between different partners. The SHARE research centre will be in possession of high-quality telecommunication equipment to facilitate cross-national attendance on seminars.

### **Popular science contributions**

Reaching a broad audience of stakeholders is important both to receive feedback on our research, but also to distribute new knowledge within the general population. Popular science contributions include all kinds of activities which is designed and aimed at targeting patients, stakeholders and society as a whole. Examples of these include, but are not limited to; users, family, healthcare professionals, students, leaders, local/regional/national governmental bodies. The SHARE research centre aims to contribute with popular science activities spread at a high variety of different arenas such as stands, meetings, lectures, learning resources, blog posts, podcasts, Facebook and website-posts and seminars. The SHARE centre will strive to provide researchers within the centre with different learning opportunities related to popular science contributions and dedicate resources to provide researchers with appropriate administrative support during such contributions.

### **Social Media**

As described above related to the academic contributions, SHARE research centre will also throughout the period actively use social media as a dissemination and public involvement channel.

News and research results designed to reach patients, stakeholders and the society as a whole will be distributed on the following channels:

- SHARE website, Norwegian version.
- Facebook

The SHARE centre also encourages researchers to actively use different social medias such a Twitter, Research gate, Facebook etc. to engage with, and disseminate information to a wider audience.

## Learning Resources

Towards the end of the period SHARE research centre will have created a number of different collaborative learning arenas and resources (such as web pages, checklists, analysis tools, frameworks etc.) enabling relevant stakeholders to collaborate, work and learn together. The learning platforms will be created for use both in the practical setting of the healthcare system and within education and research.

## Patient and stakeholder involvement

Patient and stakeholder involvement is an important aspect within the SHARE research Centre. Activities actively involving stakeholders in dissemination is therefore particularly encouraged.

## Seminars

Organize annual stakeholder seminars which will contribute to enable the translation of research evidence into interventions for stakeholder use.

## Overview over number of main activities over the five-year period

Activity	Year	2023	2024	2025	2026	2027
Peer review journals		48	50	52	55	57
Seminars		4	5	6	6	7
International and National Conference Presentations (oral/poster)		45	47	50	52	54
Social media activities*		Weekly updates	Weekly updates	Weekly updates	Weekly updates	Weekly updates
<b>Total number of activities</b>		<b>97</b>	<b>102</b>	<b>108</b>	<b>113</b>	<b>115</b>

\* The social media activities are ongoing and combines SHARE's official accounts, but also highly relates to the individual researchers' dissemination through their individual accounts. Therefore, we have not included numbers on social media activities in the dissemination plan.
